# Agenda

**1. Mission**

**2. Portfolio**

**3. Potential locations**

**4. Processes**

**5. Customer benefits**

# What is our mission?

**Since many years, Western European companies are outsourcing their activities, which are not directly their core business. In our extended workbench, some production stages or even the whole manufacturing process can be outsourced.**

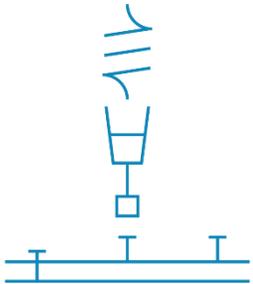

**As an assembly partner for contract manufacturing, Synermont focuses on production planning and control, as well on outstanding manufacturing quality and efficiency.**

**Our goal is to utilize existing synergies and our expertise to develop a cost effective, profession concept with added value to increase our partner's production efficiency.**

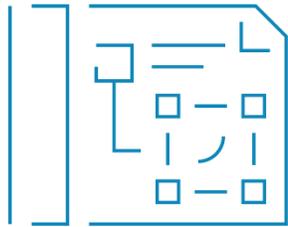

# Portfolio

**The essence of our portfolio is that our partners can choose the appropriate service based on their specific requirements. From simple pre-assembly to end-to-end service, the customer defines which processes he wants to outsource.**

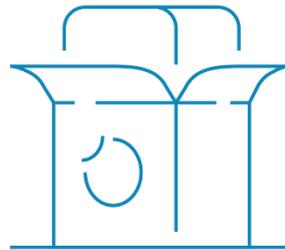

## Pre assembly

A final product consists of several different groups of components. Outsourcing the pre-assembly of these groups of components is popular in many areas of the industry, as it can optimize time and cost requirements during production which reduces the possibility of failures.

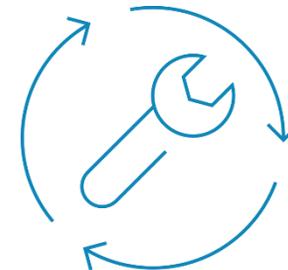

## Final assembly

In case of complex final assembly, we undertake the entire process of assembling the finished final product from the components based on the material list provided by the customer and on the accepted work instructions in line with the required quality standards.

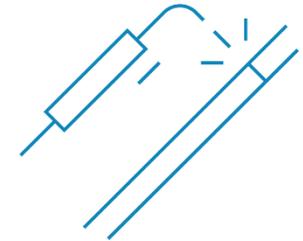

## Packaging

The packaging of finished products is becoming increasingly complex and specific from a logistics point of view. With increasing volumes of finished products and more complex packaging processes, in order to reduce costs, outsourcing packaging to a low-cost country is a viable and popular option.

## Rework

Rework or repair is the process of repairing improperly manufactured, defective or faulty parts. This process includes tasks such as disassembly, repair, replacement, reassembly and other corrections. In case of mass production, due to their complexity, these tasks usually cannot be robotized and therefore require the use of human resources.

## Welding

Synermont performs welding works on groups of components or complete end products according to previously defined and accepted work instructions and limit samples.

# Potential locations

**Synermont offers several potential manufacturing locations for contract manufacturing. Our customers can choose the ideal location for their extended workbench depending on their needs in terms of distance, logistics, etc.**

- 1. Production site – Sopron**
- 2. Production site – Szombathely**
- 3. HQ – Budapest**
- 4. Production site– Jászapáti**
- 5. Production site– Miskolc**

# Processes

**Quality is not just a phrase for Synermont, it is our guiding principle. We rely on proven quality standards which are consistently implemented during our projects.**

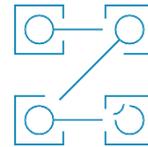

Analysing of customer's requirements

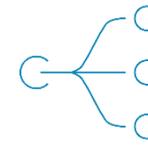

Quotation

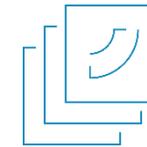

Project Kick Off

Development and Industrialization

Project Ramp Up

Serial Production

After Series

**In order to develop efficient and high quality contract manufacturing, an intensive communication and analysis are necessary before the start of the project. Our goal is to get to know the exact needs, philosophy and expectations of our partner in detail during the preparation phase**

# Customer benefits

## Cost Effectiveness

Significant cost savings potential in the operation and labour costs by the outsourced manufacturing.

## Quality

Application of global quality standards, processes and methods from the automotive industry

## Transparent communication

Standardized reporting and exchange of production data by nominated project coordinator.

## All-round service

From takeover of simple assembly activities to outsourcing the entire production process, we are able to meet our client's requirements.

## Know How

We have the right local experience and solutions to ramp up such projects

## Accurate cost planning

Our performance-based pricing allows our customers to estimate accurate costs according to quantitative and qualitative indicators

# Thank you for your attention!
